

N. SUNDIN DOCKSTA BÅTVARV

Vessels built at Docksta Båtvary

Since no records of boats built at the yard were kept previously, in 1976 a list was made of those vessels where information was obtainable. This information was obtained from existing blueprints and documentation from boat clubs and records, the Swedish Maritime Administration and the Royal Naval Materials Administration. Since 1935, many of the larger vessels should still be traceable. Rowing-boats, dinghies, open fishing boats (tenders with inboard engines), boats for outboards engines, open centre-board sailing boats and lifeboats have not been included. For a time, the building of lifeboats accounted for a major share of the yard's turnover. The total number of wooden vessels built at the yard is estimated at between 200 - 300.

Käxed, July 1976.

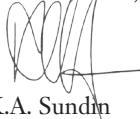

Olle Sundin

Appendix 1995

When DOCKSTAVARVET was founded as a limited company and activities continued in 1975, new constructions began with the number 301. From this number, up to and including the latest commission, NB 431, most of the vessels built have been well documented. During the accumulation of information for this publication, additional information has been obtained of the years before 1975. This information has been added as appendices. We would like to hear from anyone who spots errors in this publication, who has additional facts or photos at their disposal, or who rediscovers their own vessel here.

To all those who have devoted so much time to answering questions, searching for photos and placing other facts and documents at our disposal, we offer a large vote of thanks. Even though this publication may not contain everything, it is still of great value to us. We hope its contents will be of interest to those in "our circle" and perhaps to other boating enthusiasts elsewhere.

Docksta, Mars, 1995
